

## **WELCOME**

Palm Beach Life Extension is a fully licensed medical clinic headquartered in Palm Beach Gardens, Florida with affiliated physician extenders across the United States. We have been prescribing therapies for patients nationwide for over 6 years. The therapies we offer range from the treatment of Andropause, commonly known as male menopause, to human growth hormone replacement therapy, as well as the treatment of low testosterone levels.

Our therapies are custom designed to supplement or replace your body's natural hormones to levels that existed in your body at age 25 to 30. Since declining hormones cause us to age, it is logical that increasing those hormone levels would positively affect the aging clock, creating a more useful physiology.

We have a network of board certified physicians and nurse practitioners across the United States. We can make an appointment for you to visit one of their convenient locations or we can arrange for them to come to your home or place of business in order to perform the necessary physical exam and blood draw. Palm Beach Life Extension requires completion of blood work, a medical history form, and a physical exam before the Doctor will consider prescribing any medications. Based upon your results, one of our in-house physicians will implement a hormone replacement protocol designed specifically for you.

All our therapies are administered to qualifying patients under the strict supervision of our medical staff, overseen by our Medical Director, Jeffrey R. Perelman, M.D. All medications are prescribed by a physician and are dispensed directly from a U.S. pharmacy. There must be a medical necessity for any prescription to be written. Palm Beach Life Extension will not prescribe for anti-aging, body building, or performance enhancement of any kind and we will not treat anyone under the age of 30.
